Chak De! India "One more chance to win" (2007) N/A. Posted by 2 hours ago. Email? This is an Email from VIP Upload & Download.[Evaluation of the non-invasive method of fibrogenesis assessment for the practical application].

To establish the validity of non-invasive fibrogenesis assessment based on the multiple regression analysis of hepatometric and biochemical data by the "Principle Component Analysis" (PCA) technique. To find out the most informative parameters for the fibrosis assessment. For the purpose of the study the following groups of patients were included: 60 patients with chronic viral hepatitis C and 45 with a hepatitic B. Quantitative data on biochemical tests were derived from the laboratory data of the patients included in the study. Fibrosis evaluation was performed by using the histological and biopsy-based indices in the form of the Knodell scale. For the purpose of comparison with the non-invasive fibrosis assessment, the time-consuming method of serum sampling was utilized. A number of biochemical and serological tests were compared on the basis of the estimated probability of their fibrotic involvement according to the Knodell scale. Non-invasive fibrosis assessment based on the multiple regression analysis of hepatometric parameters (first component) and biochemical data (second component) has a high power for quantifying the extent of fibrosis ($r = 0.8$). The weighting coefficients of the first component were: METAVIR fibrosis stage 2-3 ($\beta = 0.75$); METAVIR fibrosis stage 4 ($\beta = 0.60$); and METAVIR fibrosis stage 5 ($\beta = 0.40$). The evaluation of fibrogenesis is possible by using the combination of the first two components of the PCA analysis. The liver weight coefficient ($\beta = 0.75$) was the most informative hepatometric parameter for the fibrogenesis assessment. The probability of fibrogenesis in a patient was higher in the group with increased liver weight coefficient. The multiple regression analysis of the hepatometric data and biochemical parameters after the initial phase of hepatitis B virus infection is a simple and reliable tool for the early identification of patients at high risk of developing liver fibrosis. Orointe roșu nu mai functionează. Problema a oscilat la cel mai nou sfârșit în acest an între prezentul de abia 3da54e8ca3
